

Feds Warn of Cyber Threats, Seek Expanded Authority for DHS

By Kenneth Corbin | CIO US | 28 March 12

Federal cybersecurity officials on Wednesday gave lawmakers a sobering warning about the vulnerabilities of critical information technology systems across the public and private sectors, describing a laundry list of threats and the challenge of keeping up with hackers who are continually seeking new methods of attack.

Appearing before a House subcommittee, cybersecurity authorities from the Department of Homeland Security, the Federal Communications Commission and other government arms testified to the work their agencies are undertaking in response to the ongoing threats, both internally and in concert with the private sector, but acknowledged that the challenges remain formidable and appealed for expanded government authority to shore up the nation's digital defenses.
